MEMORANDUM FOR:

You might like to take a look at the proposal. As you know the Signal Measurements Staff conducts a number of flights in and in the Corridor in order to obtain calibrated data on the antenna patterns of various radars. These used to be approached on a one by one basis. We are now obtaining a little more coercive program. I would like for you to become generally familiar with what's going on here so that we can have the benefit of your opinions in the future.
